1. The "Average Daily Combined Balance" is calculated based on the sum of your daily balances of deposit, investment and accumulated paid premium* of selected insurance products of all your single name account(s) and joint name account(s), divided by the number of days in the month. For company account, the "Average Daily Combined Balance" is calculated based on the sum of your company's daily balances of deposit, investment, accumulated paid premium* of selected insurance products and utilised business overdraft facilities, divided by the number of days in the month plus outstanding balance of business loans at the end of the month. Selected insurance products mean insurance policy(ies) with savings element.
